## Education

- **Lancaster University** *09-2025 – 09-2026*
  *MSc in Artificial Intelligence* Lancaster, UK
  - Projected to graduate with Distinction.
  - Related coursework: Machine Learning, Intelligent Agents and Autonomous Systems, Generative AI: Theory and Applications.
  - **Thesis**: Emergent Behavioural Signalling in Cooperative Multi-Agent Highway Driving - whether communication emerges in cooperative multi-agent systems.
- **FPT University** *2017 – 2022*
  *BEng in Software Engineering* Ho Chi Minh City, Vietnam
  - Cumulative GPA: 3.2/4.0.

## Experience

- **Skylab** *11-2022 – 04-2025*
  *Software Engineer* Ho Chi Minh City, Vietnam
  - Developed a cohesive, extensive, and accessible management system for control network infrastructure for organizations.
  - Conducted in-depth research and implemented the Cloudscape Design UI components framework.
  - Defined and enforced frontend source code structure, patterns, and conventions.
  - Improved the internationalization (i18n) features of the web application. Implemented a command-line interface. (CLI) to efficiently manage multiple languages development, cutting developers' development time by **80%**.
  - Collaborated closely with UX designers to create visually stunning and user-friendly interfaces for a suite of enterprise-level applications.
  - Reviewed code, provided feedback on pull requests, and discussions for code improvement.
- **FPT Software** *11-2021 – 11-2022*
  *Software Engineer* Ho Chi Minh City, Vietnam
  - Applied A/B testing to observe its impact on a **3%** change in conversion rates.
  - Established a monitoring alert system to trace users' journeys and minimize incident downtime by **10%**.
  - Conducted extensive research on emerging technologies, providing valuable insights to the team for innovative solutions.
  - Designed and built a system for customizing user's journey on the website.

## Projects

- **Capacity Limits of Post-Game Coaching in Social Deduction Agents** *12-2025 – 05-2026*
  *An collaborated research investigating whether smaller language models (SLMs) can improve their performance when guided by larger language models (LLMs) in a multi-agent game.*
  - Developed a multi-round debate multi-agent system that simulates Werewolf game.
  - Conducted literature review, conducted experiments and analyzed results.
  - **Tech stack**: Python, Numpy, Pytorch, OpenAI LLM API.
- **Majority Influence in Large Language Models-based Multi-agent Systems** *01-2026 – 03-2026*
  *An solo research investigating majority influence in LLM-based MAS, whether such behavior happens or not in AI and how it affects multi-agents systems.* Paper link / Github link
  - Conducted literature review.
  - Developed a multi-round debate multi-agent system, conducted experiments and analyzed results.
  - **Tech stack**: Python, OpenAI LLM API.
- **Emergent Behavioural Signalling in Cooperative Multi-Agent Highway Driving (Thesis)** *05-2026 – 8-2026*
  *whether communication emerges in cooperative multi-agent systems.*
  - Developed a multi-agent automotive systems simulating highway driving.
  - Conducted research and analysis of the system's behavior.
  - **Tech stack**: Python, Pytorch, Numpy, Pandas, LaTeX.

## Skills

- **Programming Languages:** Python, JavaScript, Typescript
- **Libraries:** Pytorch, Numpy, Panda, ReactJS
- **Tools:** Git, Docker
